

The Protestant University of Applied Sciences Berlin (EHB) is a performance-orientated educational and research institution for the forward-looking and community-promoting **SAGE** professional fields of social work, health/nursing and education/training. Around 1,600 students, over 60 full-time professors/lecturers and around 200 contract teachers learn, teach and research at one of the oldest training centres for social professions in Germany, which can look back on a training tradition dating back to 1904. The recognised high quality of teaching at EHB is characterised by intensive and professional support of the students.

EHB maintains good contacts with organisations and institutions in the social and healthcare sector as well as with organisations of the social welfare and Protestant churches. There are also cooperations and project partnerships with colleges and universities in Germany and abroad. EHB is recognised as a competent partner for practice-oriented teaching and application-oriented research.

Thanks to our many years of experience and innovative approach, the content of our degree programmes is developed in an academic and practice-oriented manner. Our lecturers are experienced, committed and, in some cases, clinically active themselves. For this reason, practice-based learning also takes place during the theoretical phase of the programme using various learning opportunities.

**Please note:** Due to the Nursing Studies Strengthening Act, you also need a training contract with a cooperating provider for the dual study programme (for the practical part of the university nursing training). Find more information here: [www.eh-berlin.de/hochschule/praxis-im-studium/praxis-im-bachelor-of-nursing-bsc](http://www.eh-berlin.de/hochschule/praxis-im-studium/praxis-im-bachelor-of-nursing-bsc)

### Costs for the degree programme

Tuition fees are not charged. Upon enrolment and re-registration for the next semester, costs such as the semester ticket, a contribution to material costs, the social contribution to studierendenWERK BERLIN and the contribution to the EHB student body are incurred.

### Deutschlandstipendium | Germany Scholarship

More information on the Deutschlandstipendium at the EHB can be found here:

### Why us?

#### Two degrees in 7 semesters

The dual study programme Bachelor of Nursing is accredited and has been established at EHB since 2004. Dedicated lecturers teach in a familial environment and provide individualised support.

Based on the Nursing Professions Reform Act (PflB-RefG) and the Nursing Studies Strengthening Act, the programme leads to a Bachelor of Science degree and a professional qualification as a registered nurse. The theoretical courses take place at the EHB and the practical learning phases in facilities of selected cooperation partners.

#### Who is our target group?

The degree programme is aimed at interested individuals who want to qualify for the broad field of nursing work within the scope of their first professional orientation. Lateral entry is also possible for carers with professional experience. Registered nurses have the opportunity to have their completed nursing training credited towards the Bachelor's degree programme at the EHB. The Bachelor of Nursing (B.Sc.) degree can be obtained within just 4 semesters by transferring existing competences.

#### Admission requirements

General higher education entrance qualification, university of applied sciences entrance qualification or another higher education entrance qualification recognised by law as equivalent or two years of professional experience as a registered nurse for lateral entry.

### What's new?

#### The different organisational form of teaching

The nursing degree program will be a generalist one, i.e. you will gain broad knowledge in the field of health care and nursing, geriatric nursing and health care as well as paediatric nursing.

#### Study duration: 7 semesters, 210 ECTS

##### 1st to 6th semester

- Theoretical and practical modules alternate
- Practical modules take place at acute and long-term care inpatient facilities as well as in outpatient care institutions
- Elective modules deepen personal preferences and strengths
- A practice module abroad is possible as well as the participation in international networks such as the European Network of Nursing in Higher Education or the Florence Network of Nursing and Midwifery
- Evidence-based nursing and nursing research from the very beginning, certificate acquisition (e.g. algology specialist assistant) is also possible

##### 7th semester

- Interdisciplinary elective module for in-depth study (science, counselling, pedagogy)
- Scientific treatment of a topic within the framework of the bachelor's thesis
- The Bachelor of Science degree is recognised internationally and qualifies you to work abroad as well

### How will nursing change in the future?

You will be challenged by the new distribution of tasks between the professional groups within the health care system, new collaborations and responsibilities within the framework of goal-oriented health care. With your competences, you will manage health and care processes after graduation:

- You design highly complex nursing processes that are made based on the basis of science-based decisions.
- Your in-depth knowledge of the fundamentals of nursing science and the social-institutional frameworks within nursing enables you to play a decisive role in developing nursing care.
- You develop research-based solutions to problems as well as new technologies and transfer these to your professional activities.
- Extended competences for the exercise of medical activities from 2025.

#### Does this appeal to you?

Then you can find specific information about the degree programme at [www.eh-berlin.de/en/study-programs/bachelor/bachelor-of-nursing](http://www.eh-berlin.de/en/study-programs/bachelor/bachelor-of-nursing)

We look forward to getting to know you!
